

Clean Energy Innovation Center

The Jerome Goldstein Scholarship
“Research and Cleantech Entrepreneurial Internships”
Rutgers EcoComplex
Summer 2018

The Jerome Goldstein Scholarship for EcoEntrepreneurs will support student research interns at the **EcoComplex** - Rutgers University’s Clean Energy Innovation and Environmental Research & Extension Center, during the summer of 2018.

The Goldstein Scholarship was established to support student interns working on projects in the areas of “Sustainability”, “Innovative Clean Energy Systems”, “Waste Management Technologies”, “Life Cycle Analysis (LCA)”, and “Food-Energy-Water Nexus” concepts. This year, we are also encouraging student entrepreneurs for clean energy, environment, and other clean technologies to apply for commercialization training at our clean energy business incubator.

Scholarships will be awarded to graduate and undergraduate students based on academic merit. The full-time internships will run from June through August 2018, and will be based at the EcoComplex in Bordentown, NJ. The internships will be designed such that the students will gain valuable scientific, technical and entrepreneurial experience in one or more of the areas mentioned above.

Interested students must submit their resumes and cover letters to Lorraine.Raider@rutgers.edu by April 30, 2018.
