EOAS One year post-doc extension

The Rutgers Institute of Earth, Ocean, and Atmospheric Sciences (EOAS) invites applications for a one-year extension to a Postdoctoral Fellow position. This position is intended to expand the fellow’s research into new, interdisciplinary directions in the Earth system sciences and should be carried out in collaboration with a multidisciplinary team of at least two EOAS faculty mentors. This is an internal search, open only to current Rutgers postdocs.

Candidates’ proposals should be developed in consultation with their proposed faculty mentors, who should be clearly identified in the proposal. For the EOAS faculty directory, see https://eoas.rutgers.edu/about/faculty-directory/. At least one faculty mentor should be affiliated with one of the following School of Environmental and Biological Sciences departments: Ecology, Evolution & Natural Resources; Environmental Sciences; and Marine & Coastal Sciences. Awards are for one year; the starting date is August 1, 2018.

Candidates will be evaluated based on: past record of achievement, the ability of their proposed mentors to facilitate their research, and the feasibility, intellectual merit, and broader impacts of their proposed research, including the potential for their work to advance cross-disciplinary research at Rutgers within the Earth system sciences.

For fullest consideration, applications should be received by July 5, 2018. Evaluation of applications will begin immediately. Applicants should include: a cover letter, curriculum vitae including a publication list, and a 1-page research proposal. Mentoring teams should complete and submit the Mentoring Team Commitment form. Please submit materials to Ken Eng, keng@marine.rutgers.edu
